

## Problem 8.16(b-c) #60

Homework 4

I know this is late so I don't care if it's answered in time, I was just curious. I'm getting the correct eigenvalues, but not the correct eigenvectors. Each one of my eigenvectors is off by a multiplicative constant. I must have missed it in the textbook since the section is so long, but what do I scale it by? Does it matter?
